EXPERIENCES

Informatique Système Telecoms (IST)

Web Developer

Design and development of the **FicheInfo web application**, dedicated to the management of missions and the creation of daily reports.

Definition of the application architecture and choice of technologies adapted to the project. Implementation of features such as mission tracking, task chronological management, and export of reports in PDF format.

Optimization of the user experience for intuitive and efficient use.

Faseya

Web Developer

Design and development of the **Yatouze CRM**, an innovative platform for personalized management.

Development of key modules, including human relations management, projects, and interactive dashboards.

Integration of a contact import module from an Excel file.

AI Projects

Fine-tuning LLaMA on Benin's labor code dataset. (NL-to-SQL) via the Vix assistant with gemini support. Development of ScrapX, an intelligent Gemini-based scraper for targeted data extraction. Built vision models (license plate, handwritten digits) with local training, Flask deployment, and web interface. Cinematch, a movie recommendation platform based on user preferences.
